

**PROGRAM GOAL**  
**ELECTRONICS AND COMMUNICATION ENGINEERING**  
**BACHELOR OF TECHNOLOGY PROGRAM**

**Goal**

To provide an integrated educational experience directed toward development of the ability to apply pertinent knowledge to the solution of practical problems in the graduate's engineering technology specialty. To expand scientific and engineering knowledge by preparing our graduates for employment as telecommunications analysts and engineering technologists through innovative research and hands-on training that responds to the need and challenge of our ever-changing world.

**PROGRAM OBJECTIVES**  
**ELECTRONICS AND COMMUNICATION ENGINEERING**  
**BACHELOR OF TECHNOLOGY PROGRAM**

**The program should enable the student to:**

1. Contribute to society in a broad range of careers
2. Flourish professionally in an increasingly international and rapidly changing world
3. Effectively understand, use, develop, and implement modern telecommunication systems
4. Develop skills for clear communication and responsible teamwork, and to inculcate professional attitudes and ethics, so that one is prepared for the complex modern work environment
5. Acquire sufficient breadth and depth for successful subsequent graduate study, post-graduate study, or lifelong learning
6. Develop and apply critical thinking skills, enhancing the ability to address unstructured problems specific to technical specialties in telecommunication engineering
7. Acquire technical and managerial skills necessary to enter careers in the design, application, installation, management, operation and/or maintenance of telecommunication systems

**PROGRAM OUTCOMES**  
**ELECTRONICS AND COMMUNICATION ENGINEERING**  
**BACHELOR OF TECHNOLOGY PROGRAM**

**The graduate should be able to:**

1. Demonstrate an appropriate mastery of the knowledge, techniques, skills, and tools of modern engineering, including the use of modern computer-based technologies such as the writing of programs, the use of professional software, and the use of modern electronic media, effectively in the practice of telecommunication engineering
2. Apply knowledge of:
  - a. Science and engineering to the analysis of the performance of telecommunication engineering processes and systems
  - b. Advanced mathematics, including calculus, linear algebra, probability and statistics, complex variables, vector calculus, and discrete mathematics necessary to analyze and design complex electrical and electronics devices, software, and telecommunication systems containing hardware and software components.
  - c. Statistics/probability, transform methods, or applied differential equations in support of telecommunication systems and wide area networks
3. Design and conduct experiments in telecommunication engineering, make engineering measurements, analyze and interpret data, and apply experimental results to improve processes
4. Apply creativity in the:
  - a. Analyses, design, and implementation of telecommunications systems
  - b. Analyses and implementation of switching technologies, wide area networking technologies, and policy
  - c. Management, design, and plan of wide area networks
5. Function effectively on multidisciplinary teams involving people from diverse backgrounds

6. Identify and address problems in telecommunication engineering by extending the concept of simple building blocks to system level design
7. Communicate effectively through a series of peer and faculty reviews, to include oral and written reports
8. Employ study skills and computer knowledge for lifelong learning for a successful career in telecommunication engineering
9. Demonstrate knowledge of the professional and ethical responsibilities incumbent upon the practicing telecommunication engineer
10. Demonstrate the knowledge of contemporary global and societal issues and their relationship to professional ethics and engineering solutions
11. Demonstrate commitment to quality, timeliness, and continuous improvement
