ABSTRACT

Interior design is a process of designing the interior of a room or building. Interior design is a multidimensional profession that includes conceptual development, communicating with the project and the management and execution of the design. Interior design with sustainable factors has become more important. Designers began to address the real problems of their environment design criteria in their design. This interior design project replicate the owl face and ray of sun light. The circular framework represent the face of the owl and the hanging of light replicates the eyes of the owl and black and white strips represent the ray of sun light. These design of project creates the replication what we see in our surrounding and encourages the sustainable governance. The project with a research component interpreting the usefulness of the interior’s sustainable material and the sustainable implication in the process of design decision been made.
