

Design and Fabrication of Semi-Automatic Car Washing Equipment for Rural Areas (villages) in Oman

Students name: Mr. AbdulAdhim Yousuf Saleh Al-Hajri, Mr. Ahmed Saleh Ahmed Salim Al Shabibi

Project Supervisor/Technicians : K. Mohankumar, **Technician:** Donato villaceran

Abstract:

This project mainly focuses on washing the exterior of the car and washing the car every day in rural areas of Oman is not possible since they have to travel urban areas to find car wash centers. Day-to-day professional, standard cleaning of an automobile is seemingly expensive and highly time consuming. we have focused on the difficulties faced by rural people and daily office goers in cleaning their vehicles every morning by wasting their highly productive time.

There is a lot of dirt attached to your car when you use it daily, so you will spend a lot of time and money to wash and clean it every week. In addition, you will lose a lot of time, energy and the most valuable things these days' money it looks good. Because of that we designed and fabricated a semi-automatic car washing frame which can be used in the home and easily operated by children to elder people.
