

# ICT System Guide

Aziza Saif Al-Harhi, Fatma Saleh Al-Musharfi, Tahani Abdullah Al-Aamri  
 Department of Information Technology, Ibra college of Technology

## Abstract

This system is helping our college students to find the different places and departments of the college as map. This is providing services for the user to know the new and old information about specialization, office of staff and other services of college. Also helpful for the college staffs that to reduce the time and effort in the induction week. This is to improve our experience through collect information using different facilities and methods. This project is helpful to the user to know public utilities in the college and to know about all specialization. There are ICT system is already available in Online. But our system is more advanced and easy to fine the location, departments, specialization. Also we can know the college rules and regulations. All over its very easy and useful live project for the students.

## Introduction

Information technology is one of the most important things which changed our life to many facts. The system manages our information much better. We decided to make simple system "ICT System Guide" and trying to make the system which is better. Its helping to know the information for another two years. Its good, new and easily designed for the students and staffs. Moreover, its always open. That means, the user can using the system at any time and they don't want a guide as physically. This is also helpful for us to improve our skills and knowledge. We got some knowledge exposure that when we collect the information for this project. All over its good and easy one for the end users.

## Sample Table Design

Table Name : users

Field Name	Data Type	Description
userid	Text	Primary key
Password	Text	
Nationalid	Number	
Type	Text	

Table Name : communication

Field Name	Data Type	Description
rendid	Text	Primary Key
reciveid	Text	
date	Date	
information	Text	
userid	Text	Foreign Key

## Conclusion:

The time we spend to collect information and develop the system it gives us a lot of things that are useful in our life. Some of these are, Self-learning which is that we learnt how to depend on ourselves and try to make successful system. Team work, that is, this project enables us to work in group to discuss and get more ideas for the project and choose the best one. Responsibility is working in group makes us more responsible that each one of us must do the work that is allotted in specific time.
